KUSD'S MUSIC EDUCATION PROGRAM RECEIVES NATIONAL RECOGNITION FOR 4TH CONSECUTIVE YEAR

KENOSHA, Wis. (Tuesday, April 13, 2021) – KUSD has been honored with the Best Communities for Music Education designation from The NAMM Foundation for its outstanding commitment to music education for the fourth year in a row. Now in its 22nd year, the Best Communities for Music Education designation is awarded to districts that demonstrate outstanding achievement in efforts to provide music access and education to all students.

To qualify for the Best Communities designation, KUSD answered detailed questions about funding, graduation requirements, music class participation, instruction time, facilities, support for the music program and community music-making programs. Responses were verified with school officials and reviewed by The Music Research Institute at the University of Kansas.

“The music education program offered by Kenosha Unified has been highly regarded for many years by our students, staff and families,” said Superintendent Dr. Sue Savaglio-Jarvis. “The high expectations set by our staff combined with the commitment of our students results in an exemplary program of which all are extremely proud.”

This award recognizes that Kenosha Unified is leading the way with learning opportunities as outlined in the Every Student Succeeds Act (ESSA). ESSA recommends music and the arts as important elements of a well-rounded education for all children.

Research into music education continues to demonstrate educational/cognitive and social skill benefits for children who make music. After two years of music education, research found that participants showed more substantial improvements in how the brain processes speech and reading scores than their less-involved peers and that students who are involved in music are not only more likely to graduate high school, but also to attend college as well. Everyday listening skills are stronger in musically trained children than in those without music training. Significantly, listening skills are closely tied to the ability to: perceive speech in a noisy background, pay attention, and keep sounds in memory. Later in life, individuals who took music lessons as children show stronger neural processing of sound; young adults and even older adults who have not played an instrument for up to 50 years show enhanced neural processing compared to their peers. Not to mention, social benefits include conflict resolution, teamwork skills, and how to give and receive constructive criticism.
